

It all starts
with a dream.

OCR.

Three letters that mean experienced.

AIRCRAFT SALES

- Sales
- Acquisitions
- Ownership Consulting

AIRCRAFT MAINTENANCE

- Scheduled Maintenance
- AOG Maintenance
- Modifications
- Repairs
- Parts

AIRCRAFT PRIVATE FBO

- Aircraft Management
- Hangar Leasing
- Aircraft Detailing

Those three letters are more than the name of our company. They represent an organization dedicated to supporting our customers in every way.

We understand and share the passion owners have for aviation. That's why so many of our clients return to OCR time and again, and refer us to their friends and family.

Our team's sole mission is to make every interaction a smooth and seamless experience. From the moment a customer inquires about an aircraft to final pickup — our team works like a well-oiled machine.

Our accomplished aviation professionals provide industry experience, international reach with local knowledge, and personalized attention to your aircraft requirements.

We offer incomparable service to owners of single-pilot aircraft from our 60,000 sq. ft in Long Beach, California.

Aircraft Maintenance

OCR Aviation's maintenance department has provided aircraft maintenance services for 30+ years at Long Beach Airport. As an FAA Part 145 Repair Station, our commitment to training, tooling, facilities, and our customers is the strongest on the West Coast.

Aircraft Sales & Acquisitions

We have the market knowledge, experience, and relationships required to get the best value for your airplane, which makes OCR uniquely positioned to serve our clients. We are a central touchpoint in a sizable network of aircraft owners and pilots enabling us to bring the full power of our relationships and resources to anyone looking to sell or acquire their next aircraft.

Expert Resource - Citation Product Line

OCR Aviation is West Coast authority on the Citation product line. We've bought, sold, maintained, managed, and detailed these aircraft for over a decade. We currently manage multiple Citations, and have helped our customers sell and acquire 10+ Citations in the last year alone.

Management and Private FBO

Many of our clients buy a plane to save time, enjoy flying, and simplify their life, not to be consumed by the details of aircraft management. So, they leave the details to OCR Aviation, ensuring the value of their aircraft is protected.

As a community of owner pilots, we have an intimate understanding of our clients' concerns regarding the care of their aircraft. OCR Aviation has the experience, resources, and facilities necessary to ensure your aircraft is ready when you need it.

Owning an airplane isn't complicated, but it takes time to manage all the details.

Scheduling routine and AOG maintenance, hiring pilots, instructors, cleaning crews, arranging for fuel, and securing ground support are just some of the services our aircraft management team performs to ensure your safety and save you valuable time.

OCR maximizes your aircraft's value with an efficient full team effort. Set your aircraft management on autopilot with OCR Aviation!

It's one thing to dream of owning an airplane, but quite another to bring that dream to life. The process of acquiring an airplane is an in-depth and magical experience. Choosing the right manufacturer and model is just the beginning. We offer a personalized process that eliminates surprises and ensures a stress-free transaction.

Prospective sellers meet with our aviation consultants to formulate a plan to sell their plane for the best price. Buyers benefit from our decades of extensive knowledge about the type of aircraft that will best suit their needs while staying within their budget. Our expertise has made us the leader in Cessna sales and service in Southern California.

For some of us it starts as a child. Looking up at the sky as a jet glides across the sky. Or maybe it was a model airplane that fueled your imagination for adventure and exploration.

For others it was the sheer size, speed, and sound of your first airplane trip with your family. A quick look in the cockpit at the dizzying array of switches and controls made you feel like this was your future.

An airplane is one of the most technical and inspiring achievements of our lives. The speed, altitude, and distances are so enormous they make us feel supernatural. We fly over snow-capped mountains, acres of farmland laid out like a giant quilt, and jagged coastlines, at a height and distance early aviators couldn't dream of.

The dimensions of a routine flight are almost inconceivable. We have the ability to cross continents and oceans in luxury to see the world and other cultures.

We all have our favorite airplane. Each one has a unique personality. And every new model improves on the last. Over a century of innovation and ingenuity has given us aircraft that fly safer, fly faster, and fly farther.

The next time you taxi down the runway watch the wing tips. Notice how they start to flex and rise. The faster you go, the wings bow upward, taking on the weight of the plane, lifting you to the sky, and deepening your life-long passion for planes.

We share your passion for planes.
